FORTRESS PHANTOM SERIES DETECTORS CELEBRATE 10 YEARS

(Toronto) Fortress Technology proudly marks the 10 year anniversary of its unrivaled *Phantom* line of metal detectors. The success and longevity of the *Phantom* series has enabled the company to grow rapidly and become a well-recognized world leader in metal detection.

Fortress has maintained the *Phantom* technology cutting-edge over the years by constantly improving upon its advanced features, sensitivity levels and ease-of-use. Because the *Phantom* has “evolved” within its original core architecture that flat-out works, the company has never needed to introduce a new model series.

“Sticking with the *Phantom* design and enhancing its performance ultimately benefits our customers,” said Steve Gidman, the President and co-founder of Fortress Technology. “A detector unit purchased ten years ago can still be serviced today and updated to the latest software version with plug-and-play simplicity. Return on investment is maximized and the cost of ownership is reduced”.

The *Phantom* is more popular today than ever for the same reasons that led to its initial market endorsement: Simple Operation, Outstanding Reliability, Exceptional Performance. A decade since its introduction, *Phantom* Series Metal Detectors continue to perform with rugged reliability on the production lines day-after-day. Fortress Technology looks forward to more years of the *Phantom*'s run as the trusted partner in protecting product integrity.

simple operation
outstanding reliability
exceptional performance
