FORTRESS VECTOR CONVEYOR SYSTEM COMPLIES WITH STRINGENT RETAILER CODES OF PRACTICE

Fortress Technology is reinforcing the message that their Vector metal detector / conveyor system, along with solutions for in process inspection such as pipeline and gravity, complies with ALL retailer standards, including BRC.

From initial presentation through to the accurate rejection of a contaminated product, including all the necessary failsafe's to ensure system integrity, the Vector conveyor system ticks all the boxes.

Flexibility in setup and configuration ensures full compliance to the latest guidelines, including the updated Code of Practice for metal detectors set by leading retailer, Marks & Spencer (M&S).

The integrated Stealth model metal detector also provides the capability to capture, via USB, performance information such as rejects and faults, in addition to test records and results - all vital for audit compliance. These accurate records of detector performance, changes in setup along with QA test results provides the user with peace of mind when it comes to traceability and conformity checks.

Uniquely packaged customer support products and services provide the user with all the documentation and certification necessary to satisfy stringent Food safety audit requirements. Validation documents, certified test samples and preventative maintenance programmes go hand in hand with bespoke training programmes for all levels and tiers of training including SME.

The "Never Obsolete" commitment from Fortress ensures that all products are fully compatible, ensuring the lowest cost of ownership at all times, providing cost effective upgrades and backward compatible spare parts.
